

a Same mean shift, opposite fate for a hidden minority

b One query, one library, two ways to score

c Means tie, distributions separate

d A score that grades itself cannot lose

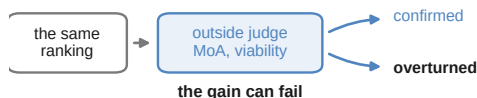

coupled evaluation

Class A

independent evaluation

Class B / C

e All three evidence classes, reported here

	published method families	this study
Class C • oracle-independent dose-response viability required for a therapeutic claim	○	● imported oracle
Class B • task-proximal MoA-nDCG, minority coverage more independent, same upstream data	○	●
Class A • objective-aligned energy regret, connectivity score the field default; it cannot fail	●	●

independence from retrieval objective ↑

headline metric: filled, reported as primary evidence; open, not reported
