

a Same mean shift, opposite fate for a hidden minority

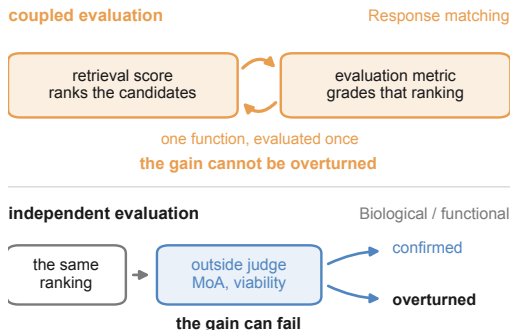

b One query, one library, two ways to score

c Means tie, distributions separate

d Aligned evaluation can reward itself

e All three evidence classes, reported here

	published method families	this study
External functional · evaluator-independent dose-response viability <i>required for a therapeutic claim</i>	○	● imported evaluator
Mechanism recovery · task-proximal MoA-nDCG, minority coverage <i>more independent, same upstream data</i>	○	●
Response matching · objective-aligned energy regret, connectivity score <i>closely aligned with the retrieval objective</i>	●	●

independence from retrieval objective ↑

headline metric: filled, reported as primary evidence; open, not reported
